The Maritime Online Platform
Made for the industry - by the industry

The Maritime Online Platform

One Maritime is an innovative online platform built by the maritime industry, for the maritime industry.

Our worldwide system blends best of breed Microsoft software technologies, maritime industry intelligence and functionality, with up to date industry information. This allows us to offer a platform to companies and organizations in the maritime industry around the world, that provides them with useful and easy to use features streamlining daily business activities on the internet.

We think of data sources and the use of data in a much different way than ever before.

One Maritime uses and mixes multiple information sources and the latest technology by taking multiple information searches, worldwide communication, collaboration and order processes of ship supply to the next level.

One Maritime provides ship owners, ship managers, ship suppliers, manufacturers and agents with brand new ways to collaborate with their customers and suppliers, find product related information quickly from a variety of catalogues, maritime information sources, and track information relevant to their core business activities such as tracking vessels, the use of advanced system integration for processing and tracking e-commerce orders and other detailed transactions.

One Maritime gives users access to the mix of data from multiple data sources - at the same time.

It changes the way that catalogues, for example, will be used in the future. One Maritime will allow users to search across information sources (multiple catalogues) faster than you can find and open a printed catalogue.

One Maritime ensures that up to date information is available at your fingertips while giving subscribers access to downloadable data and the ability to update data in their back office systems in a much simpler way.

All in all, by using the power of an intelligent web based platform that is designed specifically for the maritime industry, companies can expect to see increases in efficiency, considerable time savings, and cost savings.

Order and Service Management modules

Our order and service management modules are designed for both sides of the maritime buying spectrum, ship owners / ship managers, and ship suppliers / manufacturers. The modules facilitate management tasks related to service equipment and service items, and managing more detailed orders.

The Service Equipment and Service Item Management suite offers:

- Service equipment and service item tracking capabilities
- Overviews
- Access to lists of equipment due for survey
- Access to service history
- Uploads of service reports per vessel and per customer

Also provided with One Maritime are online contract management and owners goods management with transfer and returns management functionality.

Online workspace

One Maritime provides an online workspace for ship owners, ship managers, ship suppliers, manufacturers, ports and agencies to collaborate prior to and during docking.

This serves as a maritime specific project management workspace that can be used to manage tasks related to work orders and projects in an effective way.

Reporting and KPIs

One Maritime offers functionality to upload industry KPIs (Key Performance Indicators).

Ship suppliers can access overviews of ships in their ports with ETAs and ETDs.

KPIs are built within the system allowing companies to assess and measure the efficiency of activities.

Cloud computing

One Maritime offers services in the cloud and ShipCentric ERP online, which we combine with Microsoft Online Services such as Exchange Online, SharePoint Online and Lync Online (video conferences, etc.) and other online services.

Advertising and Company profiles

Advertising solutions within the platform provide increased contact in the global maritime industry and your target market allowing you to foster and maintain current and new partnerships.

Advertising on One Maritime gives you flexibility and empowers you to reach your customers in the industry, and get in front of new prospects faster than your competitors in a cost effective manner. Our easy to use technology provides you with the ability to track your progress and create valuable exposure for your business.

An updateable One Maritime profile lists your contact particulars, which ultimately serves as a central location for companies and organizations in the industry to find and communicate with you.

One Maritime

Maritime search engine

The search engine in One Maritime allows companies to conduct targeted queries on:

- Products in main industry catalogues, including the ISSA Ship Stores Catalogue
- Products in the One Maritime Provisions and Bonded Stores Catalogue
- Products in specific catalogues from manufacturers and suppliers
- Owner and vessel specific catalogues
- Ship owners
- Ship managers
- Ship suppliers
- Vessels
- Vessel positions
- Ports
- Agencies.

The wide array of main industry catalogues together with company and vessel specific catalogues provides users with access to one of the most comprehensive maritime search engines covering provisions, bonded stores, deck and engine, cargo access equipment, spare parts, medicine, and more.

One Maritime's search is intuitive and allows companies to run searches on multiple data points.

Ship owners and managers and their approved vendors and main equipment manufacturers can upload and update their main catalogues and also post vessel specific catalogues.

To join One Maritime or to learn more about how you can benefit from the services offered by One Maritime please contact: info@onemaritime.com

Vessel Management and search functionality
Our Vessel management module offers a comprehensive way to access details of vessels, searches by vessel name and vessel specific information, AIS related information and details pertaining to ports and agencies.

Ship owners and managers can run detailed overviews of their vessel fleet.

Some of the services that suppliers can gain access to are ETAs and ETDs of vessels arriving at their ports and receive notification on changes or arrivals to specific waypoints.
Maritime e-commerce portal
One Maritime also provides e-commerce connectivity, allowing companies to process transactions by selecting a specific maritime e-commerce system, or sending the documents electronically in a direct fashion.

The core benefit offered here is that we provide an open way for owners and managers to submit RFQs and process responses without limiting them to one way of processing e-commerce transactions. This allows them to interact directly from the online catalogues or from external systems using web service connectivity.

Suppliers and manufacturers gain access to new potential orders which can be processed directly through One Maritime.

Our e-commerce suite supports the entire order process including RFQs, orders, order confirmations, and electronic invoicing. It has also been enhanced by delivering functionality to support supplier-to-supplier RFQs and ordering processes.

Go to www.onemaritime.com to experience how you can search, qualify and communicate with your existing partners and find new ones.
